## (54) COMPOSITION

## (57) Abstract:

**PURPOSE:** To obtain a composition composed of a fluorine-based silane coupling agent and a silicone resin, having excellent adhesivity to inorganic oxide layer, smoothness and stain-proofing property and useful in optical field e.g. for the stain-proofing treatment of an antireflection film composed of inorganic oxide layers.

**CONSTITUTION:** This composition is composed of (A) a fluorine-based silane coupling agent such as a compound of formula I (Rf is a 1-20C perfluoroalkyl; R is methyl or ethyl) and (B) a silicone resin such as a resin of formula II (R<sub>1</sub> and R<sub>1</sub>' each is H or R; R<sub>2</sub> and R<sub>3</sub> each is R; (n) is 2-10). Preferably, the composition is composed of 80-90 pts.wt. of the component A and 20-10 pts.wt. of the component B.
